ANTIGUA

Contemporary Elegance

With Antigua, Alutex offers the extra modern design of a lateral arm system able to respond to the most sophisticated and demanding markets today.

Antigua is considered to be the third generation of lateral arms. From the classical systems, to the partial “cassette” solutions where only the fabric is fully protected, Antigua provides Alutex’s answer to the most contemporary demand for a complete cassette containing the whole system when fully retracted.

Produced with glossy white components fully powder coated, Antigua offers projections up to 12’ and a maximum width of 20’ with its slick cassette.

Controlled manually or by a motorized solution, Antigua is offered with any of the more than 300 acrylic fabrics today available on the market.
